

↓
New phone → It will contain all features of older version

```

public class Client {
    public static void main(String[] args) {
        // Case-1
        P p = new P();
    }
}
    
```

Annotations on the code:

- variable** points to `P p`.
- TK** points to `P`.
- RHS** points to `= new P()`.
- LHS** points to `P`.
- object** points to `new`.
- create** points to `P()`.
- returns memory address** points to `P()`.
- datatype** points to `P`.
- class** points to `P`.
- Reference type** points to `P`.
- 87k?** points to `P()`.

Reference $\Rightarrow$ P

Object $\Rightarrow$ child

Resolution $\Rightarrow$ method $\rightarrow$ child object

variables $\rightarrow$ parent reference

$\downarrow$
common
methods/
variables

not common $\rightarrow$ Parent Reference only.

Types of Inheritance

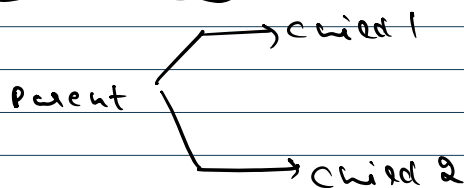

11. Single Inheritance

parent $\rightarrow$ child

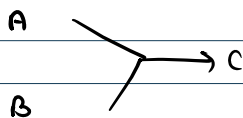

21. Mutlilevel Inh

Grand parent $\rightarrow$ parent $\rightarrow$ child

31. Hierarchical

41. Multiple Inheritance

class $\neq$ extends A, B
